

A

B

C

SWE-bench Verified (primary)

- UD cross-agent calibration audit
- GO_CANDIDATE (screening)
- 0E oracle prior-shift decomposition
- GO
- 0C late-reversal analysis (earlier direction)
- SIGNAL_NOT_YET_ROBUST (direction dropped)
- 1A same-predictor leave-two-agents-out control
- SAME_PREDICTOR_HETEROGENEITY = FALSE
- 1A-D target persistence validation
- STRONG_TARGET_SPECIFIC_SIGNAL
- 1B threshold robustness
- STRONG_PASS

TerminalBench 2.0 (boundary)

- 2A feasibility / design selection
- measured selection
- 2B fixed-scaffold replication
- NO_CROSS_BENCHMARK_SIGNAL
- 2B-D denominator diagnostic
- NO_CROSS_BENCHMARK_REPLICATION
- 2E exact-target boundary audit
- INSUFFICIENT_CROSS_BENCHMARK_SUPPORT

— SUPPORTED / positive gate — NOT SUPPORTED (negative gate; part of the design) — BOUNDARY / INDETERMINATE

The claim narrows across the stages; a negative gate is a scientific result, not an engineering failure.
